CONTENTS OF VOLUME 7

No. 1, JULY 1970

Editorial 1

A Comparison of GSR and Subjective Adaptation to Stressful Stimuli. ROBERT M. STERN, LARRY GAUPP, AND WILLIAM C. LEONARD 3

Experimenter Effects on the Physiological Experiment. RONALD G. HICKS.. 10

Psychophysiological and Cognitive Development in Children. BERT E. KAPLAN 18

The Effects of Awareness and Successive Inhibition on Interoceptive and Exteroceptive Conditioning of the Galvanic Skin Response. TADAO UNO 27

The Use of Heart Rate for the Study of Habituation in the Neonate. PETER M. STRATTON 44

Stimulation in Different Phases of the Cardiac Cycle and Reaction Time. LARRY W. THOMPSON AND JAMES BOTWINICK 57

The Parotid Puzzle: A Review of the Literature on Human Salivation and its Applications to Psychophysiology. CLINTON C. BROWN 66

Activation States as Assessed by Verbal Report and Four Psychophysiological Variables. ROBERT THAYER 86

Differences in Tracking Skill and Psychophysiological Activation Dynamics in Children High or Low in Persistence in Schoolwork. INGMAR DUREMAN AND ÅKE PÅLSHAMMAR 95

Interaction of Electro-ocular Potentials with the Contingent Negative Variation. MARVIN WASMAN, SHERROD D. MOREHEAD, HO-YOUNG LEE, AND VERNON ROWLAND 103

Sleep Analysis and a Simple Technique for Selective Deprivation of Low-voltage Fast-wave Sleep in a Species of Deermouse *P. m. bairdi*. MERRILL M. MITLER AND RALPH LEVINE 112

Methodology

Circadian Rhythms: A Model for the Interpretation of Multimodal Circadian Spectra. BERNARD SALTZBERG 121

Instrumentation

An Inexpensive Method for Programming Stimuli using Magnetic Tape. STEPHEN W. PORGES AND HIRAM E. FITZGERALD 124

Instrument for Direct Readout of Log Conductance (Log 1/R) Measures of the Galvanic Skin Response. C. A. KEUCHENMEISTER. 128

A Simple Device for the Polygraphic Recording of Judgments. ROBERT STRAHAN 135

An Instrument for Predicting the Occurrence of the P-R Interval of the Normal Human Electrocardiogram. PHILLIP R. THORNE, BERNARD T. ENGEL, AND REGINALD E. QUILTER 138

XUM

A Technique for Monitoring the Heart Rate of Mice. DAVID BLIZARD AND ROBERTA WELTY 143

Brief Report

The GSR Recovery Limb in Chronic Schizophrenia. ALBERT F. AX AND JACQUELINE L. BAMFORD 145

Announcements 148

Author Index 154

No. 2, SEPTEMBER 1970

Electrodermal and Cardiac Responses of Schizophrenic Children to Sensory Stimuli. MARTHA E. BERNAL AND WILLIAM HANSFORD MILLER. 155

The Effect of GSR Confirmed Perception of Bisensory Input on Immediate Verbal Memory. IRVING J. SNIDER AND ALBERT S. BREGMAN 169

Instrumental Modification of the GSR. RANDALL B. MARTIN AND SANFORD J. DEAN 178

The Effect of Exogenous Changes in Heart Rate and Rhythm upon Reaction Time Performance. JOHN B. NOWLIN, CARL EISDORFER, ROBERT WHALEN, AND WILLIAM G. TROYER 186

Some Parameters of Heart Rate Change: Perceptual Versus Motor Task Requirements, Noxiousness, and Uncertainty. J. RICHARD JENNINGS, JAMES R. AVERILL, EDWARD M. OPTON, AND RICHARD S. LAZARUS 194

Respiration and Sucking as Components of the Orienting Reaction in Newborns. ARNOLD J. SAMEROFF 213

Physiological and Behavioral Indicants of Activation. ROBERT G. EASON AND LINDA M. DUDLEY 223

Relationships Among Responses in the Human Newborn: The Non-Association and Non-Equivalence Among Different Indicators of Responsiveness. GERALD TURKEWITZ, TINA MOREAU, HERBERT G. BIRCH, AND LINDA DAVIS 233

Methodology

Quantification of the REM Sleep Cycle as a Rhythm. GORDON G. GLOBUS 248

The Reduction of Palmar Skin Potential by Epidermal Hydration. DON C. FOWLES AND P. H. VENABLES 254

Square-Wave Analysis of Skin Impedance. DAVID T. LYKKEN 262

Instrumentation

Evoked Potential Averager Made Up from Laboratory Instruments. MITSUO NUMOTO 276

Transducer Bridge Amplifier to Directly Drive Low Sensitivity Oscillographic Recorders. DAVID KRAUSMAN 279

Detachable Lead Holder for Human Subjects. GLENN F. WILSON AND DONALD B. LINDSLEY 281

Apparatus and Technique for Work with the Curarized Rat. WILLIAM W. HAHN 283
A Device for Estimating Stability of Stance in Human Subjects. ROBERT E. SHIPLEY AND R. J. HARLEY 287

Special Publication

Abstracts of Papers Presented to the Tenth Annual Meeting of the Association for the Psychophysiological Study of Sleep. ROSALIND CARTWRIGHT AND ALLAN RECHTSCHAFFEN, PROGRAM CHAIRMEN, AND JOHN RHODES, ARRANGEMENTS CHAIRMAN 293
Announcements 359
Author Index 365

No. 3, NOVEMBER 1970

Mean Heart Rate Predicted by Task Demand Characteristics. HARTVIG DAHL AND DONALD P. SPENCE 369
Sleep of Night Workers: EEG Recordings. D. F. KRIPKE, B. COOK, AND O. F. LEWIS 377
Quantitative Evoked Potential Correlates of the Probability of Events. PATRICIA TUETING, SAMUEL SUTTON, AND JOSEPH ZUBIN 385
Instrumental Modification of Elicited Autonomic Responses. SUSAN R. SHNIDMAN AND DAVID SHAPIRO 395
Avoidance Conditioning of the GSR: Nature of the Response. ANNE M. SCHELL AND WILLIAM W. GRINGS 402
Autonomic Responses to Affective Visual Stimulation. ROBERT HARE, KEITH WOOD, SUE BRITAIN, AND JANICE SHADMAN 408
Cortical Visual Evoked Response in Children With Learning Disorders. C. KEITH CONNERS 418
Heart Rate Responses of the Curarized Rat. WILLIAM W. HAHN AND JOHN SLAUGHTER 429
Manipulation of Contrast Between Differential GSRs in Very Young Children. ISRAEL LIEBLICH 436
Alpha Activity During Inhibitory Brain Processes. L. G. HEINEMANN AND H. EMRICH 442
Awareness of EEG–Subjective Activity Relationships Detected Within a Closed Feedback System. BARBARA B. BROWN 451
The Effect of Induced Heart Rate Change and Neuroticism on the Resolution of Temporally Paired Flashes. D. R. BOISSONNEAULT, M. E. DOROSH, AND J. E. TONG 465
The Relationship Between Stimulus Information, Reaction Time, and Cortical Habituation. WILLIAM C. ORR AND JOHN A. STERN 475

Methodology

Analysis of Heart Rate Response Curves: A Comment on Pooled Interaction Error Terms. FRANCES K. GRAHAM 485

XUM

Electrocutaneous Threshold Changes Produced by Electric Shock. BERNARD T. TURSKY, DAVID GREENBLATT, AND DONALD O'CONNELL. 490

Instrumentation

A Radiotelemetry Stimulator for Conditioning of Large Animals. W. MORTON CALDWELL AND ALLEN B. JUDY. 499

Heart Rate Derived from Blood Pressure and Other Physiological Signals. DAVID KRAUSMAN. 503

"Dream Detector" and Automatization of REMP-Awakening Technique for the Study of Dreaming. TERUO OKUMA, ETSUO FUKUMA, AND NAOYUKI HATA. 508

A New Method for Detecting Eye Movement in Sleep. MAX F. TOTH. 516

Announcements. 524

SUBJECT INDEX FOR VOLUME 7

Activation (see also Arousal)
  experimentally manipulated, effects on evoked responses, heart rate, skin conductance, muscle tension, and reaction time, 223
  induced heart rate acceleration, effect on signal discrimination of high vs low neurotics, 465
  reliable measurement of, using physiological indices and verbal report, 86
Adaptation, subjective, to shock vs noise stimuli, compared to GSR habituation, 3
Affect, social, and experimenter effects on response bias and perceptual defense, 10
Affective stimuli, see Stimulus, affective
Alpha
  effects of hypnotically suggested blindness, Phenothiazine treatment in schizophrenics, and neutral vs emotionally-provoking stimuli, 442
  feedback and control of, and subjective activity, 451
Anacova, see Analysis of covariance
Analog signals, averager for measurement of cortical evoked potentials, 276
Analysis of covariance, in measurement of heart rate responses and habituation, in infants, 44
Analysis of variance
  of heart rate response curves, use of pooled interaction error terms, 485
  in measurement of heart rate responses and habituation, in infants, 44
Anova, see Analysis of variance
Anticipatory response, in GSR, vs orienting response in instrumental conditioning, 178
Apparatus, see Instrumentation
Approach-avoidance conflict, see Conflict
Arousal (see also Activation)
  due to uncertainty, effects on orienting response habituation and reaction time, 475
  generalized, vs directional fractionation, 223
  in neonates, association and equivalence among different indicators, 233
Attention
  and task demand, effect on heart rate during perceptual-motor and cognitive tasks, 369
  in reaction time experiment, effects on heart rate and skin resistance responses and performance, 194
Audition, in neonates
  and comparison of different indicators of arousal, 233
  respiratory and sucking responses, orienting response vs defensive reflex, 213
Auditory stimulation, see Stimulus, auditory
Autistic children, GSR and heart rate responses and habituation to auditory and visual stimuli, 155
Autocorrelation, binary, in quantification of REM sleep cycle, 248
Automation, direct readout of log skin conductance, instrumentation for, 128
Autonomic conditioning, see Conditioning
Autonomic reactivity, in children, effects of stimulus frequency, stimulus relevance, and verbalization in GSR information detection, 436
Avoidance conditioning, see Conditioning, instrumental
Awareness
  of avoidance contingency, effect on GSR conditioning, 402
  of CS-UCS contingencies, effect on GSR conditioning, 27
  of EEG–subjective activity relationships, 451

Balance, postural, in human subjects, instrumentation for measurement, 287
Beta, feedback and control of, and subjective activity, 451
Biological clocks, mathematical model for interpretation of multimodal circadian spectra, 121
Biotelemetry, stimulator for conditioning of large animals, 499
Bisensory input, see Stimulus modality
Breathing rate, see Respiration rate

XUM

Cardiac cycle
effect on reaction time of phase within which stimulus occurs, 57
prediction of P-R interval, instrumentation for, 138
Cardiac pacing, at different rates, effect on reaction time of cardiac patients, 186
Cardiotachometers, in deriving continuous on-line output of beat-by-beat heart rate changes, instrumentation, 503
Cephalic vasomotor response, orienting vs defensive responses, and habituation, to pleasant vs neutral vs unpleasant stimuli, variable or repetitive, 408
Cerebral dominance, and dyslexia, evidence of attenuation of visual evoked responses in left hemisphere, 418
Child development, cognition, and skin conductance base levels during word association, 18
Childhood schizophrenia, GSR and heart rate responses and habituation to auditory and visual stimuli, vs normal children, 155
Children
cognitive development, and skin conductance base levels during word association, 18
GSR information detection, effects of stimulus frequency, stimulus relevance, and verbalization, 436
persistence ratings, and tracking skill and physiological variables, 95
poor readers, and attenuation of visual evoked responses, 418
schizophrenic vs normal, GSR and heart rate responses and habituation to auditory and visual stimuli, 155
Circadian periodicity, mathematical model for interpretation of multimodal spectra, 121
Circadian rhythms, and effects of night shift work on sleep patterns and work quality, 377
Closed eyes, vs open eyes, in reduction of contamination by eye movements of contingent negative variation, 103
Cognitive development, and skin conductance base levels during word association in children, 18
Cognitive mediation, effect of instructions on instrumental conditioning of GSR, 178
Cognitive task, task demand and heart rate, 369
Color perception, and subjective activity, 451
Computer, in direct readout of log skin conductance, 128
Conditioning
classical
GSR, interoceptive vs exteroceptive, effects of response measures, awareness and successive inhibition, 27
human salivation, review of literature, 66
instrumental
avoidance, of GSR
effect on heart rate deceleration response, 402
effects of instructions, contingency, and criterion latency, 178
operant
EEG, and subjective activity, 451
human salivation, review of literature, 66
skin potential responses, effect of reinforcement, 395
Conflict, temporal approach-avoidance, in investigating relationships among persistence ratings and tracking skill and physiological variables, in children, 95
Contingent negative variation (CNV), measurement of, contamination by eye movements, 103
Contingent reinforcement, vs noncontingent, effect on instrumental conditioning of GSR, 178
Curare, effects on heart rate of rats during classical conditioning, on conditioned and unconditioned responses, 429
Curarized rats, instrumentation for adequate maintenance of respiration, 283
Current density, in square wave analysis of skin impedance, 262

Deermouse, sleep scoring method and REM deprivation technique, 112
Defensive reflex
respiration and sucking, in neonates, to auditory stimuli, 213
vs orienting response, and habituation, in skin conductance, heart rate, finger pulse, cephalic vasomotor response, and eyeblink rate, to pleasant vs

neutral vs unpleasant stimuli, variable or repetitive, 408
Demand characteristic, effects on response bias and perceptual defense, 10
Densitometer, inexpensive technique for measurement of cortical evoked potentials, 276
Depression, and salivation, review of literature, 66
Detector, in deriving continuous on-line output of beat-by-beat heart rate changes, instrumentation, 503
Directional fractionation
in children, during various tasks, 18
vs generalized arousal, 223
Dreaming, automatic REM-awakening device for study of dreaming, 508
Drug effects, on stability of stance, device for measurement, 287
Dyslexia, and attenuation of visual evoked responses, 418

Electrical properties of skin, and elevation of electrocutaneous threshold due to shock, 490
Electrocardiogram (EKG)
effect on reaction time of phase within which stimulus occurs, 57
P-R interval, instrumentation for prediction of, 138
Electrocorticogram, in measurement of sleep in deermouse, 112
Electrocutaneous threshold, effect of electric shock, 490
Electrode area, and square wave analysis of skin impedance, 262
Electrode lead holder, detachable, for human subjects, 281
Electrodermal responses
operant conditioning of, effects of reinforcement, 395
orienting, effect of uncertainty in reaction time task on habituation, 475
Electrodes, for detection of eye movements during sleep, 516
Electroencephalogram (EEG)
alpha
effect of inhibitory brain processes, 442
feedback and control of, 451
attenuation of visual evoked responses in left parietal area, and verbal skills, 418
beta, feedback and control of, 451
during sleep, effects of night shift work, 377
late positive-going component of evoked responses, effect of stimulus uncertainty, 385
orienting response, alpha desynchrony, effect of uncertainty in reaction time task on habituation, 475
period and rhythmicity of REM sleep, method for quantification, 248
theta, feedback and control of, 451
EEG feedback, and voluntary control and subjective activity, 451
Electromyogram (EMG), in measurement of sleep in deermouse, 112
Electro-oculogram (EOG)
detection of eye movements during sleep, electrodes, 516
effect on measurement of contingent negative variation, 103
in automatic detection of REM sleep, instrumentation, 508
Elicited responses, in skin potential, effects of reinforcement in operant conditioning, 395
Emotion
and salivation, review of literature, 66
effect on alpha activity, 442
Epidermis, hydration of, effect on skin potential, 254
Error variance, in analysis of heart rate response curves, use of pooled interaction error terms in analysis of variance, 485
Event probability, effect on auditory evoked response components, 385
Evoked cortical potentials, see Evoked responses
Evoked responses
auditory, effect of stimulus uncertainty, 385
measurement with inexpensive signal averager, 276
visual
attenuated, and verbal skills, 418
effects of experimentally manipulated states of activation, 223
Expectancy, effects on response bias and perceptual defense, 10
Experimental expectancies, effects on response bias and perceptual defense, 10
Experimenter effects, on response bias and perceptual defense, 10
Eye movements
automatic detection of, for REM awakening, 508
contamination of contingent negative variation, 103

XUM

detection of during sleep, electrodes, 516
in neonates, to auditory stimuli, 223
Eyeblink rate, orienting vs defensive responses, and habituation, to pleasant vs neutral vs unpleasant stimuli, variable or repetitive, 408

Facets design, for manipulation of stimulus frequency, stimulus relevance, and verbalization in GSR information detection in children, 436
Finger blood volume, as reliable indicator of activation states, compared to verbal report, 86
Finger movements, in neonates, to auditory stimuli, 233
Finger pulse, orienting vs defensive responses, and habituation, to pleasant vs neutral vs unpleasant stimuli, variable or repetitive, 408
Flow rate, in measurement of human salivation, review of literature, 66
Fluid pressures, transducer bridge amplifier for recording of, 279

Galvanic skin response (GSR)
and performance on paired associate learning, effects of relevant distraction, 169
avoidance conditioning of
effect on heart rate deceleration response, 402
effects of instructions, contingency, and criterion latency, 178
classical conditioning of, interoceptive vs exteroceptive, effects of response measures, awareness, and successive inhibition, 27
habituation of, to shock vs noise stimuli, compared to subjective adaptation, 3
in information detection in children, effects of stimulus frequency, stimulus relevance, and verbalization, 436
recovery limb, and schizophrenia, 145
response and habituation to auditory and visual stimuli, in autistic vs normal children, 155
Glycol, to reduce epidermal hydration, effect on skin potential, 254

Habituation
of GSR
to auditory and visual stimuli, in autistic vs normal children, 155
to shock vs noise stimuli, compared to subjective adaptation, 3
of heart rate responses
in infants, methodology for reliable measurement, 44
to auditory and visual stimuli, in autistic vs normal children, 155
of orienting responses, alpha desynchrony and skin conductance, effect of uncertainty in reaction time task, 475
of orienting vs defensive responses, in skin conductance, heart rate, finger pulse, cephalic vasomotor response, and eyeblink rate, to pleasant vs neutral vs unpleasant stimuli, variable or repetitive, 408
Heart rate
acceleration, in children, and environmental rejection, 18
analysis of response curves, use of pooled interaction error terms in analysis of variance, 485
as reliable indicator of activation states, compared to verbal report, 86
background level, effect on reaction time of cardiac patients, 186
beat-by-beat changes, instrumentation for continuous on-line output, 503
deceleration
effect of avoidance conditioning of GSR, 402
in children, and environmental intake task, 18
during perceptual-motor and cognitive tasks, effects of task demand, 369
effects of experimentally manipulated states of activation, 223
in children, during tracking task, and persistence ratings and tracking skill, 95
in mice, instrumentation for monitoring of, 143
in rats, effects of curare during classical conditioning, on conditioned and unconditioned responses, 429
induced acceleration, effect on signal discrimination of high vs low neurotics, 465
orienting vs defensive responses, and habituation, to pleasant vs neutral vs unpleasant stimuli, variable or repetitive, 408
response
and habituation
in infants, methodology for reliable measurement, 44

to auditory and visual stimuli, in autistic vs normal children, 155
during reaction time task, effects of perceptual vs motor requirements, uncertainty, and noxiousness, 194
in neonates, to auditory stimuli, 233
stabilized, in curarized rats, with adequate respirating device, 283
History, of research on human salivation, 66
Hospital work, night shift, effects on sleep patterns and work quality, 377
Human salivation, review of literature, 66
Hydration, epidermal, effect on skin potential, 254
Hypnosis, suggested blindness, effect on alpha activity, 442

Individual differences, in persistence, tracking skill, and physiological variables, in children, 95
Individual response specificity, in determining reliable indicators of activation states, 86
Information detection, using GSR, in children, effects of stimulus frequency, stimulus relevance, and verbalization, 436
Information processing, and heart rate during perceptual-motor and cognitive tasks, 369
Inhibition, of brain processes, effect on alpha activity, 442
Instructions, effect on instrumental conditioning of GSR, 178
Instrumental conditioning, see Conditioning
Instrumentation
automatic REM-awakening device for study of dreaming, 508
continuous on-line output of beat-by-beat heart rate changes, 503
detachable lead holder for human subjects, 281
direct readout of log skin conductance, 128
electrodes for eye movement detection during sleep, 516
estimating stability of stance in human subjects, 287
heart rate monitoring in mice, 143
measurement of human salivation, review of literature, 66
polygraphic recording of judgments, 135
predicting P-R interval of EKG, 138
programming stimuli, 124
radiotelemetry stimulator for conditioning of large animals, 499
REM-deprivation in deermouse, 112
respirating curarized rats, 283
signal averager for measurement of cortical evoked potentials, 276
transducer bridge amplifier for recording of fluid pressures, 279
Intake-rejection hypothesis, and heart rate responses
during perceptual-motor and cognitive tasks, 369
in children, 18
Integrators, in deriving continuous on-line output of beat-by-beat heart rate changes, instrumentation, 503
Interference, with paired associate learning, effects on performance and GSR, 169
Interoceptive conditioning, of GSR, effects of response measures, awareness, and successive inhibition, 27
Interstimulus interval, long, choice of response measures in GSR conditioning analysis, 27

Judgments, polygraphic recording of, 135

Law of initial value, and reliable measurement of heart rate responses and habituation, in infants, 44

Magnetic tape, in programming stimuli, 124
Measurement, of human salivation, review of literature, 66
Methodology
analysis of heart rate response curves, use of pooled interaction error terms in analysis of variance, 485
choice of response measures in GSR conditioning analysis, 27
effects of epidermal hydration on skin potential, 254
experimenter effects on response bias and perceptual defense, 10
mathematical model for interpretation of multimodal circadian spectra, 121
measurement of contingent negative variation, reducing contamination by eye movements, 103
quantification of REM sleep cycle, 248
reliable measurement of activation, using physiological indices and verbal report, 86

XUM

reliable measurement of neonatal heart rate response and habituation, 44
REM deprivation technique for deermouse, 112
scoring of sleep stages, in deermouse, 112
square wave analysis of skin impedance, 262
Mice, instrumentation for monitoring heart rate, 143
Motivation, and tracking skill and physiological variables, in children, 95
Motor task, vs perceptual task, in reaction time experiment, effects on heart rate and skin resistance responses and performance, 194
Muscle action potentials, as reliable indicator of activation states, compared to verbal report, 86
Muscle tension (see also Electromyogram and Muscle action potentials), effects of experimentally manipulated states of activation, 223

Neonates
heart rate responses and finger and eye movements to auditory stimuli, 233
heart rate responses and habituation, methodology for reliable measurement, 44
respiratory and non-nutritive sucking responses to auditory stimulation, 213
Neuroticism, high vs low, and effect of accelerated heart rate on signal discrimination, 465
Newborns, see Neonates
Night work, effects on sleep patterns and work quality, 377
Noncontingent reinforcement, vs contingent, effect on instrumental conditioning of GSR, 178
Noxiousness, shock, in reaction time experiment, effects on heart rate and skin resistance responses and performance, 194

Operant conditioning, see Conditioning, instrumental
Operational amplifiers, in recording of fluid pressures, 279
Orienting response
and habituation of
cephalic vasomotor response, vs defensive reflex, to variable or repetitive affective stimuli, 408
EEG, alpha desynchrony, effect of uncertainty in reaction time task, 475
eyeblink rate, vs defensive reflex, to variable or repetitive affective stimuli, 408
finger pulse, vs defensive reflex, to variable or repetitive affective stimuli, 408
heart rate
in normal vs autistic children, 155
vs defensive reflex, to variable or repetitive affective stimuli, 408
skin conductance
effect of uncertainty in reaction time task, 475
vs defensive reflex, to variable or repetitive affective stimuli, 408
eye movements, in neonates, to auditory stimuli, 233
finger movements, in neonates, to auditory stimuli, 233
GSR, vs anticipatory response in instrumental conditioning, 178
heart rate, in neonates, to auditory stimuli, 233
respiratory deceleration, in neonates, to auditory stimuli, 213

Pain mechanisms, elevation of electrocutaneous threshold due to shock, 490
Paired associate learning, effects of relevant distraction on performance and GSR, 169
Parasympathetic response, and human salivation, review of literature, 66
Parotid gland, and human salivation, review of literature, 66
Perceptual defense
and experimenter effects, 10
effect on alpha activity, 442
Perceptual task
and experimenter effects, 10
signal discrimination, effect of accelerated heart rate on performance of high vs low neurotics, 465
vs motor task, in reaction time experiment, effects on heart rate and skin resistance responses and performance, 194
Perceptual-motor task, task demand and heart rate, 369

Performance
paired associate learning, and GSR, effects of relevant distraction, 169
tracking task, in children, and persistence ratings and physiological variables, 95
Periodicity, in REM sleep, method for sleep cycle quantification, 248
Persistence, and tracking skill and physiological variables, in children, 95
Phenothiazine treatment, for schizophrenia, effect on alpha activity, 442
Physiologic signals, vascular phenomena, in deriving continuous on-line output of beat-by-beat heart rate changes, instrumentation, 503
Physiological pressures, transducer bridge amplifier for recording of, 279
Polarization capacity, and square wave analysis of skin impedance, 262
Polygraphic recording, of judgments, 135
Preconscious factors, in voluntary control of EEG, 451
Preparatory interval, in reaction time task, effects controlled in investigating relationship between EKG phase of stimulation and reaction time, 57
Programming, of stimuli, instrumentation, for, 124

Radiotelemetry, stimulator for conditioning of large animals, 499
Rats
curarized, instrumentation for adequate maintenance of respiration, 283
effects of curare on heart rate during classical conditioning, on conditioned and unconditioned responses, 429
Reaction time
and cardiac cycle phase, instrumentation for prediction of P-R interval, 138
and heart rate and skin resistance responses, effects of perceptual vs motor requirements, uncertainty, and noxiousness, 194
effect of phase of cardiac cycle within which stimulus occurs, 57
effect of uncertainty on performance, 475
effects of experimentally manipulated states of activation, 223
of cardiac patients, effects of different background heart rate levels, 186
Recovery limb, of GSR, and schizophrenia, 145
Regression analysis, in correcting for prestimulus levels, in measurement of heart rate responses and habituation, in infants, 44
Reliability
experimenter effects on response bias and perceptual defense, 10
of measurement
of activation, using physiological indices and verbal report, 86
of contingent negative variation, reduction of contamination by eye movements, 103
of neonatal heart rate response and habituation, 44
REM deprivation, technique for deermouse, 112
REM sleep, automatic awakening device for study of dreaming, 508
REM sleep cycle, method for quantification as a rhythm, 248
Respiration
as used in prediction of P-R interval of EKG, 138
in curarized rats, instrumentation for adequate maintenance, 283
rate, in children, during tracking task, and persistence ratings, and tracking skill, 95
response, in neonates, to auditory stimuli, 213
Response bias, and experimenter effects, 10
Response equivalence, among different indicators of arousal, in neonates, 233
Response measures
choice of criterion latency, effect on instrumental conditioning of GSR, 178
for arousal, association and equivalence among indicators, in neonates, 233
for reliable analysis of neonatal heart rate, 44
in long interstimulus intervals, effects on GSR conditioning analysis, 27
of heart rate, and use of pooled interaction error terms in analysis of variance, 485
